HOT SHEET METAL FORMING
OF HIGH-PERFORMANCE STEEL
CHS²

June 15-17, 2009, Luleå, Sweden
Proceedings

Edited by
Prof. Mats Oldenburg, Luleå University of Technology, Sweden
Prof. Kurt Steinhoff, University of Kassel, Germany
Prof. Braham Prakash, Luleå University of Technology, Sweden

# Table of contents

## Materials I

*Dong Wei Fan, Han Soo Kim and Bruno C. De Cooman*
Physical metallurgy of hot press forming coating degradation suppression ...........7

*Nak-Hyun Kim, Ki-Young Kwon and Chung-Gil Kang*
The effect of cooling rate on mechanical properties in hot press forming of Al-Si coated 22MnB5 sheet and its theoretical temperature prediction .................................................17

*Kurt Steinhoff, Nicolas Saba, Manuel Maikranz-Valentin and Ursula Weidig*
Optimized processes and products in hot sheet metal forming ...........................................29

## Modelling & Simulation I

*Tobias Olsson*
An LS-DYNA material model for simulations of hot stamping processes of ultra high strength steels ..................................................................................................................43

*Laurent Durrenberger, Joël Wilsius and Philipp Hein*
Impact of the constitutive model on the hot-forming numerical predictions of Usibor1500P .........................................................................................................................51

*Iñigo Aranguren, Maite Santos, Sonia Varela, Beatriz González, Marian Gutiérrez and Borja Fernández*
Evaluation and optimization of the use of simulation software codes for the design of a tooling for a hot stamped industrial part .........................................................59

*Thomas Schönbach and Michael Kerausch*
Effective usage of simulation techniques for the layout of hotforming processes .................................................................................................................................69

## Materials II

*Hans-Gerd Lambers, Sergej Tschumak, Hans Jürgen Maier and Demircan Canadinc*
Tensile properties of 51 CrV 4 steel in martensitic, bainitic and austenitic state .................................................................................................................................77
Hermann Autenrieth, Norman Herzig, Jürgen Hoffmeister, Volker Schulze and Lothar W. Meyer
Influence of loading state on ductile failure behaviour of AISI 1045 in a normalized state and numerical description and application ....................87

Kazuhisa Kusumi, Shuji Yamamoto, Tetsuou Takesita and Masayuki Abe
The effect of martensitic transformation on the spring-back behaviour of the hot stamping .................................................................97

Alexander Bardelck, Mary Wells and Michael Worwick
The effect of cooling rate on the mechanical properties and energy absorption potential of hardened boron steel ......................................105

Ingrid Picas, Ricardo Hernández, Daniel Casellas and Isaac Valls
Cold cutting of microstructurally tailored hot formed components ...............115

Thorsten Labudde and Wolfgang Bleck
Formability characterisation of press hardened steels ..........................127

Process Design I

Hyunwoo So, Hartmut Hoffmann and Rolland Golle
Blanking of press hardened ultra high strength steel ................................137

Stéphane Graff and Franz-Josef Lenze
Monitoring the hot stamping process: From hot stamping- to crash-simulations ..............................................................147

Hossein Karbasian, Alexander Brosius and A. Erman Tekkaya
Influence of process control on geometrical and mechanical properties of hot stamped parts ...............................................................157

Ignacio García Acha, Borja Fernández, Agustín Sanz, Iñigo Aranguren, Beatriz González and Sonia Varela
Die Development from the part concept to the production line ..................165

Ralf Kolleck, Jens Aspacher and Robert Veit
Efficiency of hot forming processes ....................................................173
Process Design II

Reimund Neugebauer, Angela Göschel, Andreas Sterzing and Frank Schieck
Gas forming with integrated heat treatment for high performance steel - a solution approach for press hardened tubes and profiles ..................................181

Ryan George, Alexander Bardelcik and Michael Worswick
Development of a hot forming die to produce parts with tailored mechanical properties – Numerical study..........................................................189

Kent Eriksson and Mats Lindman
Press hardening - opportunity or limitation? ..........................................................199

Marc Decker and Hubertus Valpertz
Hot forming trends – New technologies for existing systems................................205

Franz-Josef Lenze, Sascha Sikora, Dirk Sauer and Oliver Straube
Materials and process developments on the field of hot stamping technology ......211

Takehide Senuma, Hideaki Magome, Akihiro Tanabe and Yoshito Takemoto
New hot stamping technology characterized by its high productivity...............221

Modelling & Simulation II

Hans-Åke Häggblad, Daniel Berglund, Karl-Gustaf Sundin and Mats Oldenburg
Formulation of a finite element model for localisation and crack initiation in components of ultra high strength steels ...............................229

Per Salomonsson and Mats Oldenburg
Investigation of heat transfer in the press hardening process ...........................239

Göran Lindkvist, Hans-Åke Häggblad and Mats Oldenburg
Thermo-mechanical simulation of high temperature formblowing and hardening.....................................................................................247

Lionel Morancçay, Gonzalo de los Rios, Said Mamouri, Erwan Beauchesne and Subir Roy
Recent advances in hot sheet metal forming simulation using RADIOSS® explicit finite element code ..............................................................255
Products

Stefan Goedicke, Stefan Sepeur, Christine Breyer, Maria Köyer and Jörg Lewandowski
Development of an anti scaling coating with active corrosion protection for hot sheet metal forming ................................................................. 265

Thomas Stoehr, Juergen Lechler and Marion Merklein
Investigations on different strategies for influencing the microstructural properties with respect to partial hot stamping ......................... 273

Josef Faderl, Siegfried Kolnberger, Thomas Kurz, Gerald Luckeneder, Thomas Manzenreiter and Martin Rosner
phs-ultraform® – Continuous galvanizing meets press-hardening ................................................................. 283

Daniel Berglund
Hot Stamped components with tailored properties – Simulation and validation of Product Performance ................................................................. 293

Lars Sandberg, Stefan Hortlund and Göran Berglund
Formblowing and Hardening of an A-pillar .................................................................................. 303

Michael Braun and Christian Fritzsche
Joining of hot-formed steel .................................................................................. 313

Materials III

Rolf Schwartz and Harald Lehmann
Developments in the field of heat treatment systems for hot-form hardening lines .................................................................................. 323

Isaac Valls, Begoña Casas and Noemí Rodríguez
Improving die durability in Hot Stamping and Hard Cutting .................................................................................. 331

Esa Vuorinen, Lin Wang, Sanja Stanojevic and Braham Prakash
Influence of retained austenite on rolling-sliding wear resistance of austempered silicon alloyed steel .................................................................................. 339

Jens Hardell and Braham Prakash
Tribological properties of PVD coated and plasma nitrided hot forming tool steel during sliding against UHSS at elevated temperature .................................................................................. 349
